

Attribute Graph

All attributes hierarchically visualized with a graph. The attributes with no parent are on top of each image. The name of the attribute can be seen in the Vertices in the following format: (name) - (ID).

Functional group

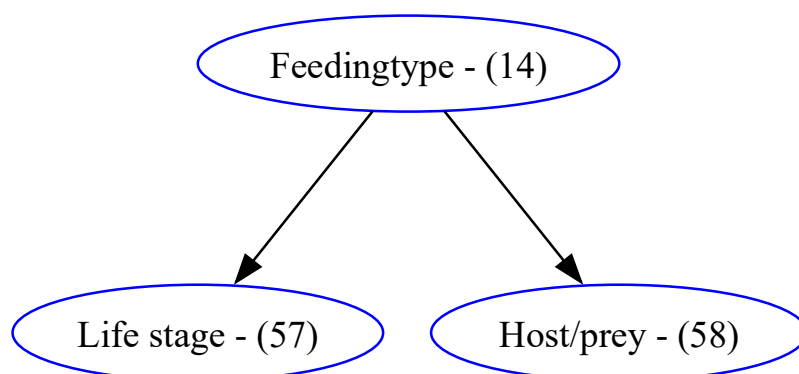

Fossil range

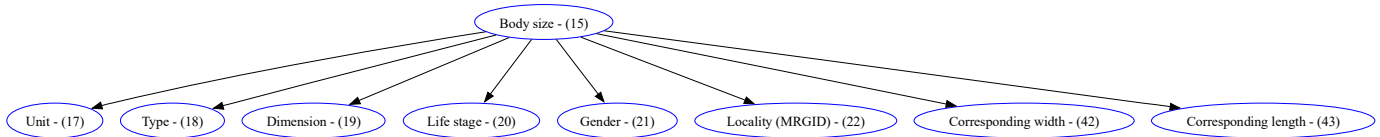

Paraphyletic group

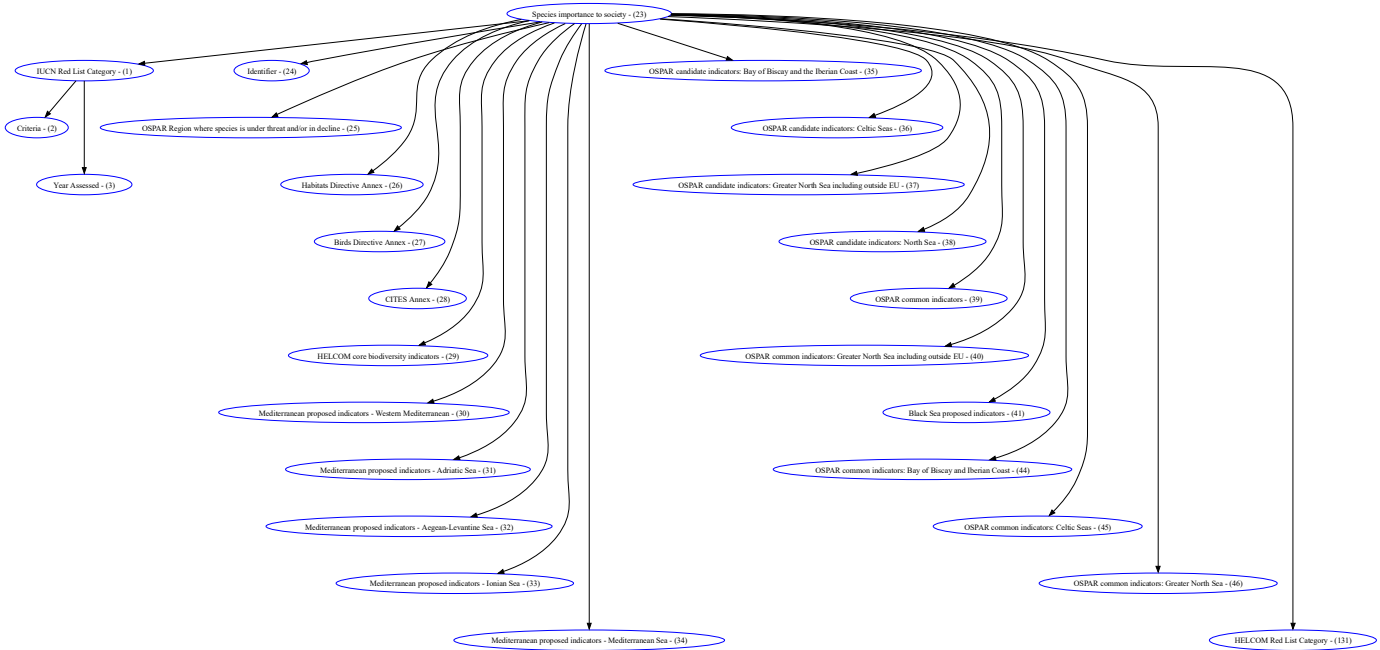

Feedingtype

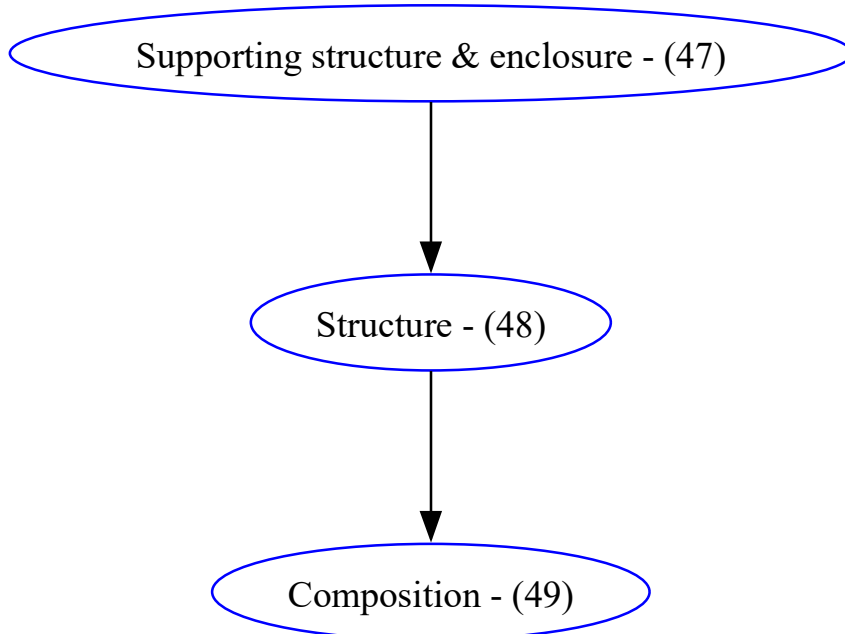

Body size

Species importance to society

Supporting structure & enclosure

AMBI ecological group

AMBI ecological group - (52)

Body size (qualitative)

Body size (qualitative) - (55)

Life stage - (56)

Gender - (132)

Plant habit

Plant habit - (61)

Development

Development - (62)

Mobility

Mobility - (63)

Life stage - (64)

Brooding

Brooding - (65)

Wave exposure

Wave exposure - (66)

Life stage - (91)

Environmental position

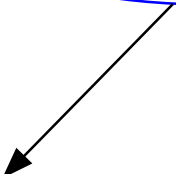

Environmental position - (67)

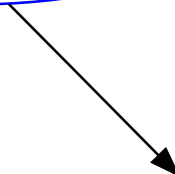

Life stage - (92)

Seasonality

Seasonality - (68)

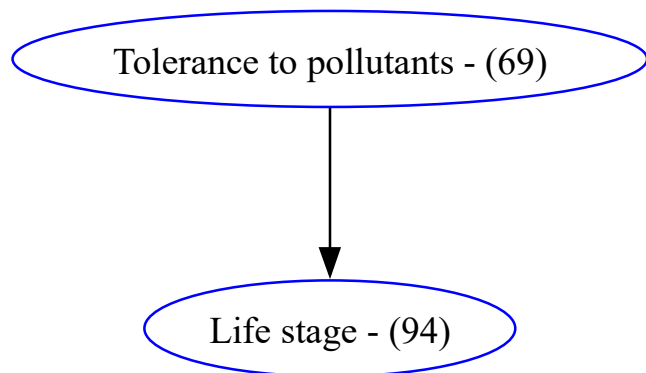

Life stage - (93)

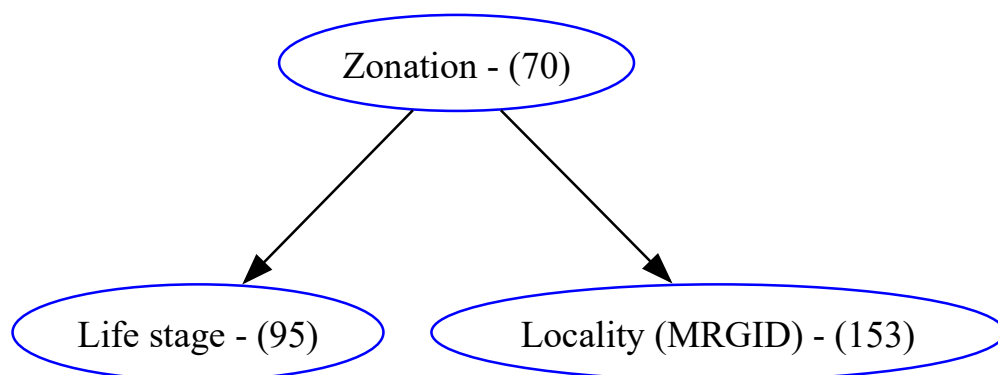

Locality (MRGID) - (112)

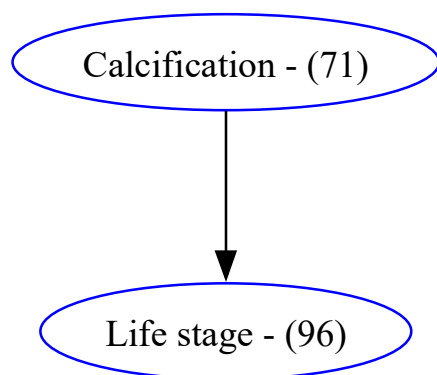

Tolerance to pollutants

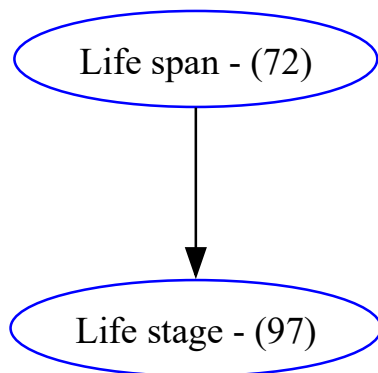

Zonation

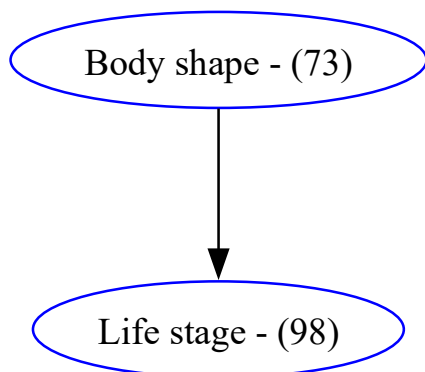

Calcification

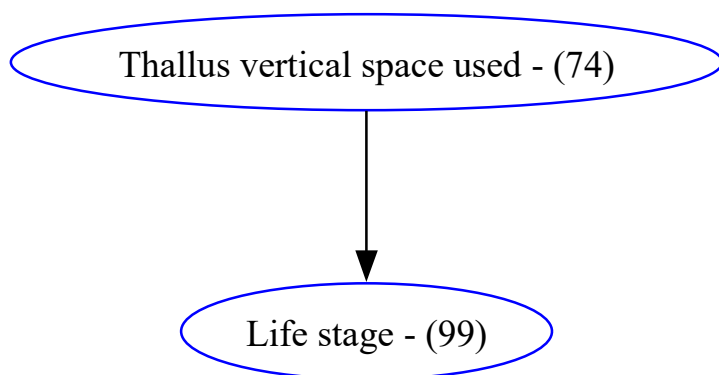

Life span

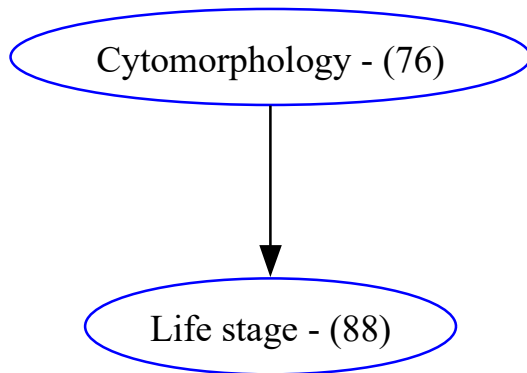

Body shape

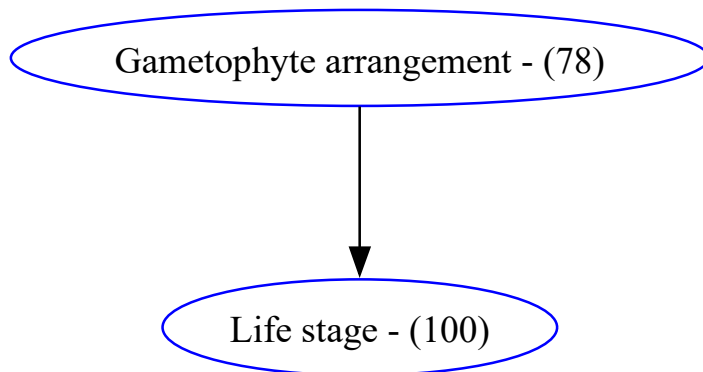

Thallus vertical space used

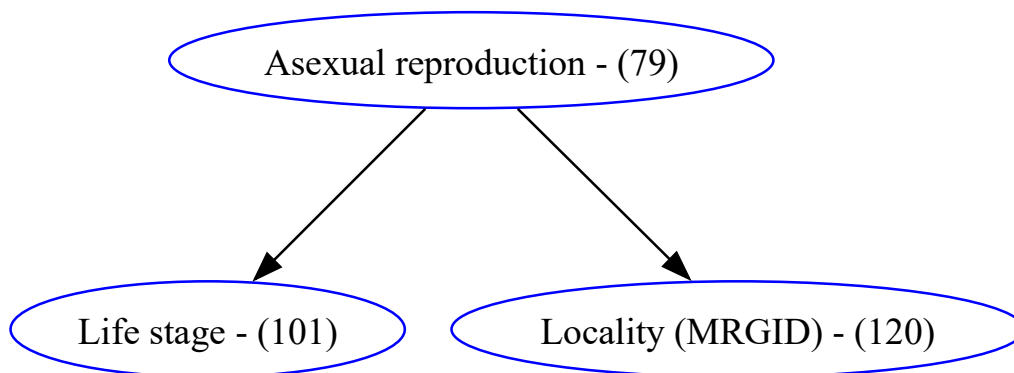

Cytomorphology

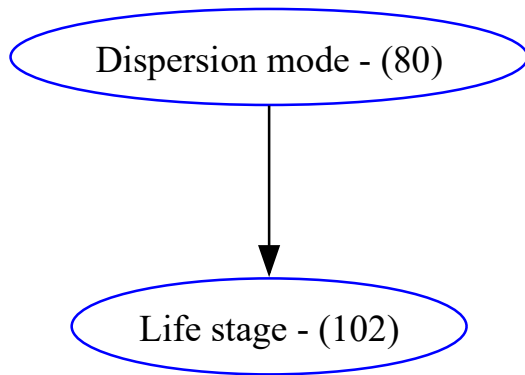

Gametophyte arrangement

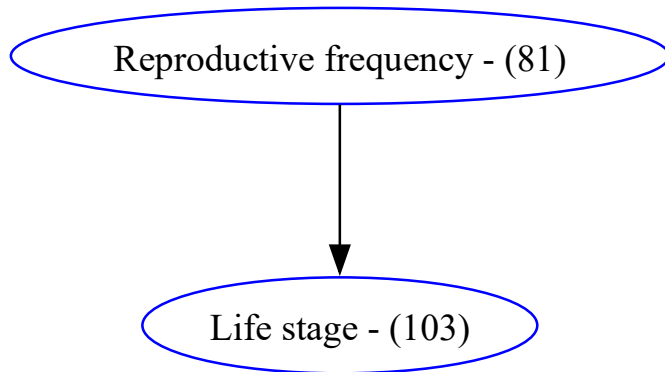

Asexual reproduction

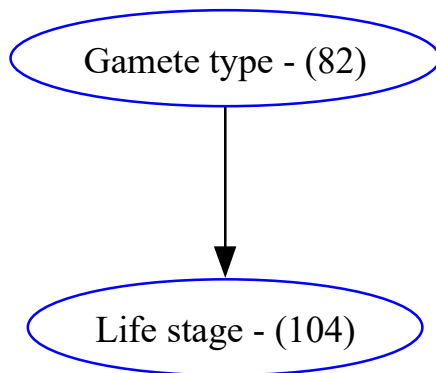

Dispersion mode

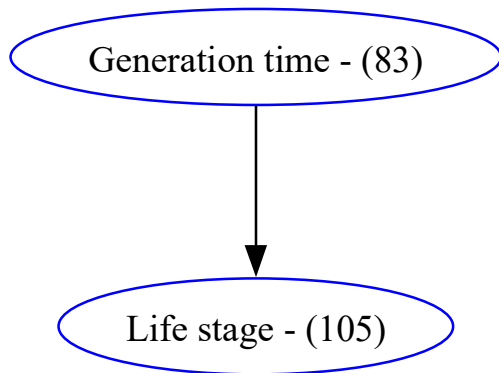

Reproductive frequency

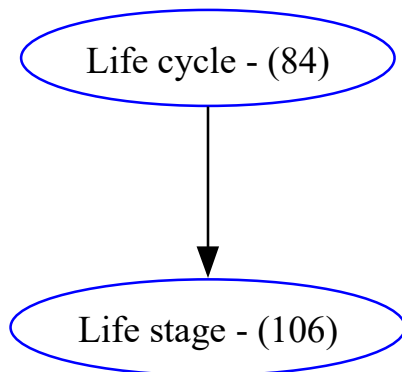

Gamete type

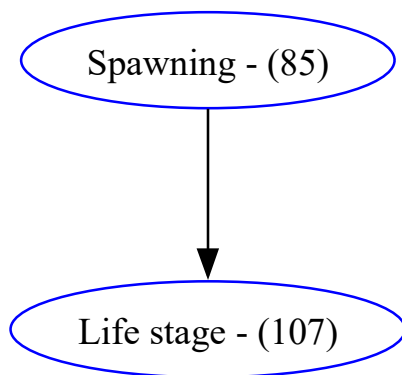

Generation time

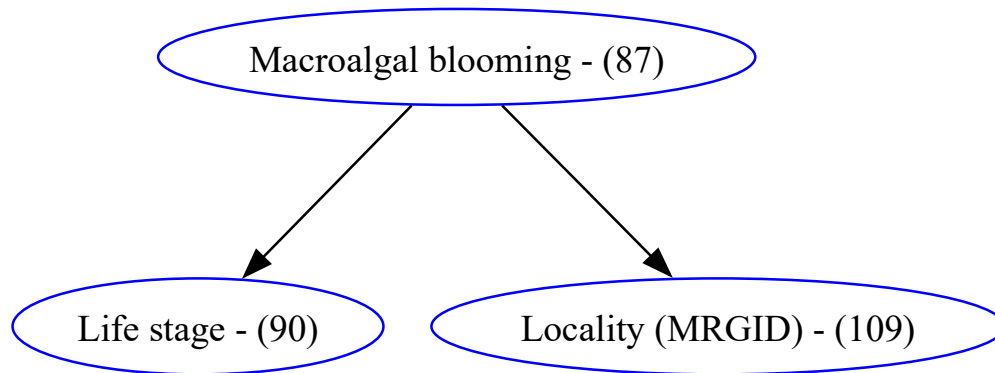

Life cycle

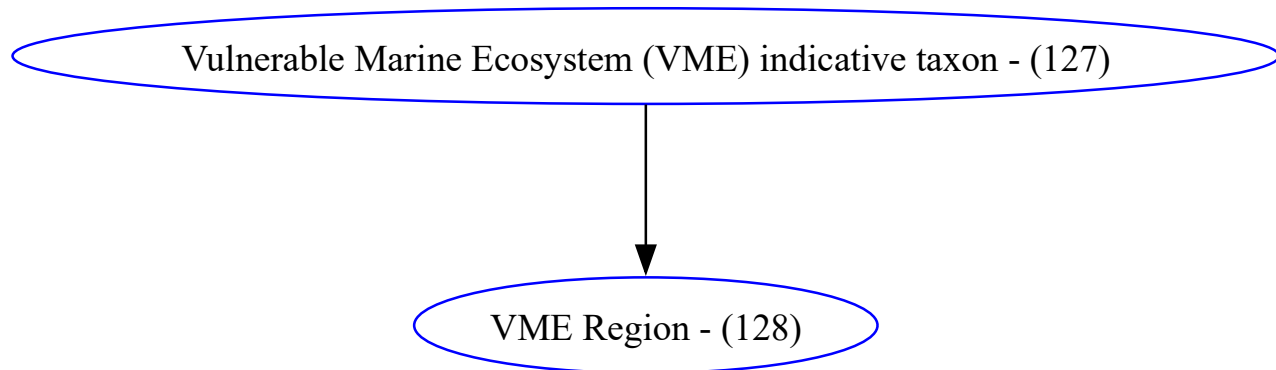

Spawning

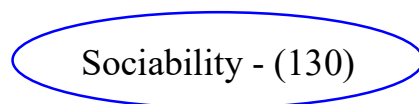

Macroalgal blooming

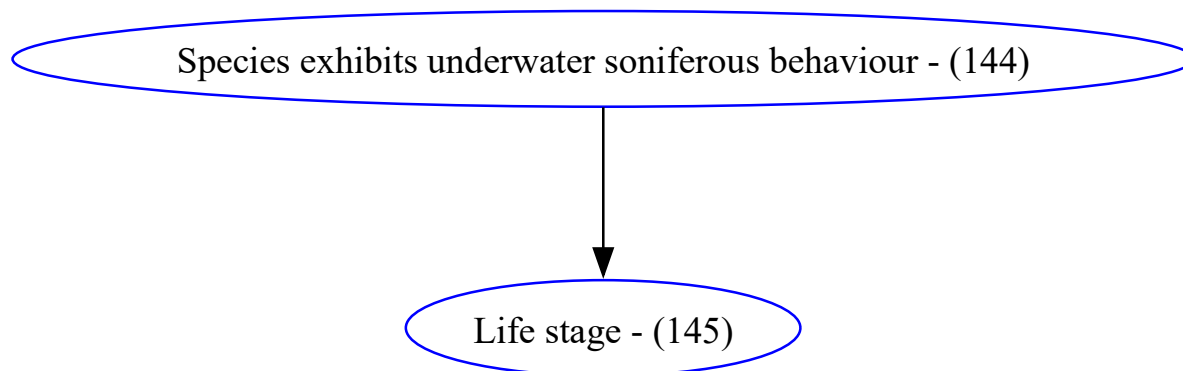

Vulnerable Marine Ecosystem (VME) indicative taxon

Sociability

Species exhibits underwater soniferous behaviour

Irradiance preference

Irradiance preference - (146)

Modes of reproduction

Modes of reproduction - (147)
